

Module 2 – Repository Management

Dr. R. Varalakshmi

Dean of Academics, Associate Professor and Head
M.Sc. Data Science and Artificial Intelligence

WHO CHANGED IT? • WHAT CHANGED? • CAN WE GO BACK?

THE BIG IDEA

A repository gives the project a HOME, MEMORY and CONTROL.

Teaching metaphor: “Imagine a school project cupboard that remembers every important version.”

Dr. R. VARALAKSHMI, Dean of Academics, Associate Professor and Head, M.Sc DS and AI

Your project has a memory problem

Before GitHub, students often created files like final, final2, final-new, final-real.

project_final_FINAL_v7_REAL.docx

WHO CHANGED IT? • WHAT CHANGED? • CAN WE GO BACK?

THE BIG IDEA

A repository gives the project a HOME, MEMORY and CONTROL.

Teaching metaphor: “Imagine a school project cupboard that remembers every important version.”

CONCEPT

02 / 10

Repository = Project Home

A repository is the central home for project files, documentation and revision history.

HOME

Files and folders live here.

MEMORY

Commits and history record change.

CONTROL

Settings manage access and behavior.

Student check: Explain “repository” to your partner without using the word “GitHub.”

BUILD

02 / 10

Creating a Repository

Turn an idea into a real project home.

1. **Open GitHub**
2. **New repository**
3. **Choose a clear name**
4. **Add description**
5. **Choose visibility**
6. **Add README**
7. **Create**

Example repository

**student-learning-
portfolio**

My learning projects and
documentation.

Mini challenge: choose a repository name for your own project.

Repository Settings

Settings are the project's control room.

Rule: settings are powerful. Change them deliberately, especially access and destructive options.

ACTION

04 / 10

Uploading & Organizing Files

Move files into the repository, then make them easy to find.

1 • UPLOAD

Prepare a safe practice file.
Add it to the repository.
Commit the change.

2 • ORGANIZE

Group similar files.
Use meaningful names.
Avoid a single giant pile.

3 • CHECK

Open the folders.
Confirm files are where expected.
Keep the structure simple.

Suggested structure

docs/ projects/ images/ reports/ README.md

README + Repository Visibility

One tells the visitor what the project is. The other controls who can access it.

README = Welcome Note

Include:

- What is this?
- Why is it useful?
- How do I start?
- Who created it?

Metaphor: tour guide.

Visibility = Who gets the key?

PUBLIC 🌐

Suitable content can be seen broadly.

PRIVATE 🔒

Access is restricted.

Always check privacy, permissions and secrets before publishing.

Decision question: “Would I be comfortable showing this repository on the classroom projector?”

REUSE

07 / 10

Repository Templates

A template is a reusable project blueprint.

Metaphor: template = architectural blueprint. It saves repeated setup work.

TOTAL MODULE

File History & Commit Concept

A commit is a meaningful checkpoint; file history helps you see how one file evolved.

PROJECT STORY

Commit = “Save this important checkpoint.”

Good messages: “Add README introduction” • “Fix attendance calculation” • “Add monthly chart”

Version History, Download & Delete

Know how to move out, inspect the past and handle destructive actions safely.

VERSION HISTORY

Find earlier checkpoints.
Compare what changed.
Understand the project
story.

DOWNLOAD

Code → Download ZIP.
Use for a local copy or
archive.
Keep valuable work backed
up.

DELETE ⚠

Use only when appropriate.
Practice on a disposable
repository.
Never delete valuable work
casually.

Safety metaphor: Download is making a spare copy; Delete is throwing away the cupboard.

CLOSING CHALLENGE

10 / 10

Don't just store a project. Build its story.

Create one repository today that another student can understand in two minutes.

- ✓ Create a professional repository
- ✓ Add a clear README
- ✓ Organize folders
- ✓ Upload 3 safe files
- ✓ Make 3 meaningful commits
- ✓ Inspect history
- ✓ Choose visibility intentionally
- ✓ Download a ZIP copy

YOUR MISSION → CREATE YOUR REPOSITORY TODAY

Next module: Documentation using Markdown.
